USE OF PLASTICIZER - EML-121-93

In reviewing the data presented, EG&G Rocky Flats concurs that use of plasticizer in C-train processing will be beneficial and is approved. However, for A/B train, the data is inconclusive. There are doubts about setting time and meeting the DOT regulations for transport of cast half-crates to tents. For now, as additional work of this nature on A/B train is not authorized, use of plasticizer on A/B train is to be placed on hold.
